Education

Punjab Engineering College, Chandigarh

B.Tech, Computer Science and Engineering (Data Science Specialization)

2022–2026

CGPA: **7.94/10**

Skills & Knowledge

- **CS & System Design:** DSA, OOP, OS, CN, DBMS, REST APIs, WebSockets, async workers, caching, auth, rate limiting
- **Languages & Tools:** Python · C++ · C · TypeScript · JavaScript · SQL · Git · Docker
- **Frameworks & Data:** Django REST · React · PostgreSQL · Redis · EDA · feature engineering · SQL query writing
- **Professional Skills:** Communication, technical documentation, debugging, AI-assisted development, and daily use of coding agents

Experience

Machine Learning & Software Engineering Intern — Statcon Electronics

Jan 2025 – Jun 2025

- Built a Li-ion battery predictive-maintenance workflow using the NASA Battery Dataset; engineered time-series features and evaluated ML/DL models for RUL prediction.
- Developed real-time dashboards for 48V SMPS Power Plant monitoring and field-system analysis.
- Built a Django REST firmware-security platform with flash-count tracking, OTP-based access, usage-based pricing, and automated billing.

Projects

NGU Spices — Production E-Commerce Platform

nidhimasala.kaushaljain.com | [Backend](#) | [Frontend](#)

- Built a full-stack e-commerce platform with a Django REST backend, React storefront, and admin panel covering products, orders, coupons, policies, and dashboard stats.
- Implemented full order lifecycle: catalog, combo offers, cart with stock locking, checkout, order tracking, cancellations, and verified-purchase reviews.
- Built an AI shopping assistant as a tool-calling agent with regional/phonetic spice synonym generation, fuzzy search over an LLM-populated knowledge base, and a unified AI + human-admin chat channel.
- Designed a behavioral analytics and recommendations engine: event ingestion, privacy-preserving anonymous counters, sales rollups, and an admin Insights API.
- Deployed with Docker, Nginx, AWS EC2, self-hosted PostgreSQL + PgBouncer, and Cloudinary for media; Redis caching with signal-based invalidation across all product and category endpoints.

AIAAS — Agentic AI Workflow Automation Platform (*In Progress*)

aiaas.kaushaljain.com | [Backend](#) | [Frontend](#)

- Building an agentic workflow platform with a Django REST backend and React + TypeScript visual editor for creating, validating, and executing node-based AI automations.
- Designing a compiler-style backend that converts ReactFlow JSON into an executable graph with DAG validation, reachability checks, config validation, expression resolution, and subworkflow support.
- Implementing a modular execution engine with shared workflow state, execution logs, heartbeat tracking, pause/resume, and WebSocket updates for long-running workflows.
- Adding multi-provider LLM routing, MCP tool access, encrypted credential storage, human approval gates, and reusable skills/templates.
- Architected a clean compiler/executor separation to enable isolated DAG compilation testing independent of live workflow execution, improving reliability and debuggability.

Achievements & Activities

- Achieved **98.38 percentile** in JEE Mains.
- Solved **500+** problems on LeetCode across data structures, algorithms, and dynamic programming.
- PEC Music Club: **1st** place in Battle of Bands (PEC Fest), 2nd place at Palaksha, and 3rd place at Amity Mohali.
- Active pianist, music composer, and sound engineer.
